

All,

I am opposed to Docket 03-104.

The level of interference to licensed users of the spectrum mentioned would be a problem. As this service is proposed for use over power lines, the possible interference to grid users as well as the power company's PLC devices could also become a major problem. And last, the broad based nature of this type of service could be a source of interference to those agencies that require communications in this spectrum to help insure national security.

Bill Ramsey
